Type cast from Copper Alloy Metal is the Lightest and Most Durable in the World

Our Collective Specimen Book

We show in the following pages specimens from types made by the Dickinson, Boston and Central, and also include the latest and most desirable faces cast by other leading foundries. The names of the various foundries appear over their patented series.

The arrangement and printing of these pages is the result of necessary haste, but we bespeak the leniency of the printer when considering these imperfections in connection with the large labor involved, and the variety and scope of the exhibit.

Fonts shown as made by other foundries will be carried in stock, but customers must recognize inevitable delays when sizes occasionally become exhausted.

The Dickinson Electrotpe Foundry has one of the most complete electrotyping plants in the country, and is prepared to do superior work promptly and at low prices. Wood Engraving, Process Plates, etc., carefully and understandingly attended to.

Wood Type, Cabinets, Galleys, Inks, Presses, and all Tools and Machinery for Printers will be sold at the lowest market prices for cash or on reasonable credit.

With many customers our business relations have extended over a long term of years, and we desire to retain all of our old friends and to make many new ones through honorable dealings and by the quality and finish of our productions.

All of our Type is cast from Copper Alloy Metal
