ALL WELL DESIGNED TYPES ARE ENTIRELY PRACTICAL AND ALWAYS EASY TO READ

How is one to assess and evaluate a type face in terms of its esthetic design? Why do the pacemakers in the art of printing rave over a specific face of type? What do they see in it? Why is it so superlatively pleasant to their eyes?

Good design is always practical design. And what they see in a good type design is, partly, its excellent practical fitness to perform its work. It has a "heft" and balance in all of its parts just right for its size, as any good tool has.

Your good chair has all of its parts made nicely to the right size to do exactly the work that the chair has to do, neither clumsy and thick, nor "skinny" and weak; no waste of material and no lack of strength. And, beyond that, the chair may have been made by a man who worked out in it his sense of fine shapes and curves and proportions: it may be, actually, a work of art.

The same thing holds for shapes of letters. And your chair, or your letter (if a true artist made it) will have, besides its good looks, a suitability to the nth degree to be sat in, or stamped on paper and read.

How is one to assess and evaluate a type face in terms of its esthetic design? Why do the pace-makers in the art of printing rave over a specific face of type? What do they see in it? Why is it so superlatively pleasant to their eyes?

Good design is always practical type design. And what they see in a good type design is, partly, its excellent practical fitness to perform its work. It has a "heft" and balance in all of its parts just right for its size, as any good tool has.

Your good chair has all of its parts made nicely to the right size to do exactly the work that the chair has to do, neither clumsy and thick, nor "skinny" and weak: no waste of material and no lack of strength. And, beyond that, the chair may have been made by a man who worked out in it his sense of fine shapes and curves and proportions: it may be, actually, a work of art.

The same thing holds for shapes of letters. And your chair, or your letter (if a true artist made it) will have, besides its good looks, a suitability to the nth degree to be sat in, or stamped on paper and read.

What Are Fine Types?

That explains, in a way, why the experts rave over the fine shapes of letters; but it fails to explain where- in the shapes are fine. If you seek to go further with the inquiry, theories will be your only answer.

Here is a theory that the propo-

Fine written letters were fine because they were produced in the most direct and simple way, by a tool in the hands of a person expert in its use: by a person, moreover, who was an artist (i.e., a person equipped to make sound judgments about lines, curves, proportions, etc.).

The artist of that moment when printing was invented who furnished the fine written patterns for type was (luckily for printing) working at the top notch of a fine tradition of calligraphy. He was making sound judgments about lines and curves and proportions of letters. He had resurrected an ancient distinguished style of writing and had added
